

# Richard Dinh

## Full Stack Developer

Garden Grove, CA

### Summary

Full Stack Web Developer with previous experience with Business and Recruitment. Experienced and passionate at creating MERN web applications. Known for my strong attention to detail, ability to work in a fast-paced environment, and desire for continued learning, I am confident I can bring value to your team!

### Work History

#### Junior Engineer Consultant (Part - Time) Sept 2020 - Present

*Learning Equality, San Diego, California*

- Utilize Python to web scrape and collect learning resources and upload them into Kolibri learning platform.
- Assist in implementing new features to Learning Equality's homebrew tool - Ricecooker
- Assist in error checking and testing new features in Ricecooker.

#### Recruiting Coordinator / Sourcer Jan. 2017 - Sept. 2019

*Congruex, Orange, California*

- Assisted in creating and facilitating new hire onboarding process (up to 60 new hires a month).
- Coordinate and schedule all interviews company-wide.
- Acted as the first point of contact for 30+ on-premise employees.
- Conducted pre-screening of potential candidates.
- Analyzed resumes to determine potential candidates for clients.
- Update and maintain data in multiple team reports and ATS.

### Personal Projects

#### Animedop - <https://animedop.herokuapp.com/>

Github: <https://github.com/richard-dinh/animedop>

*Web application for anime lovers! Users are able to search up animes by name and watch their openings and endings.*

- Utilizes web scrapping to gather Anime opening and ending data.
- Developed function to parse data gathered from Reddit API.
- Implemented special features such as saving previous searches and skipping to next video using arrow keys.
- Technologies: React, Material-UI, Axios, Nodejs, Express, Reddit API, Jikan API, React-Spring,

#### Cartner-Golf - <https://cartner.herokuapp.com/>

Github: <https://github.com/JFrick1992/cartner-golf-web>

*Social media platform for golfers. Built using the MERN stack, Cartner-Golf allow users to create an account (with password authentication), search for and add friends, and invite friends to a round of golf with a built in round scorecard.*

- Set up the Friends page as well as creating the routes to add, delete, remove, and accept a friend.
- Created and designed the Round Scorecard as well as making the card dynamically render when there is user input.
- Developed routes to save and retrieve a user's scores in a round.
- Technologies: HTML5, CSS3, ReactJS, Material-UI, Axios, Nodejs, Express, MongoDB, Mongoose, Passport
